

# VisionDOC

**Think outside the filing cabinet. Free your desktop.**  
[The simple way to manage your land records.]

**VisionDOC** is a unique land record management system that allows you to keep a neat and up-to-date registry of all your territorial electronic documentation and paperwork. This system also georeferences your documents to their corresponding territory through a cutting edge, customised interface. Just select a territory on a map to visualise, edit and print it. It's as easy as that!

### **A document management system that reflects you day-to-day activities**

If you work in territory management or in another area where seeing georeferenced and registered documentation is a plus, this is the perfect system for you. The VisionDOC solution is an ideal document management system because it lets you choose categories of indexing and research filters specific to your needs. Whether you are a land surveyor, an engineer, architect, municipal or government officer, configuring the registry system to your own management style will convince you that VisionDOC is an indispensable management tool!

### **Do your indexing electronically and get rid of that mountain of paperwork**

Finding a hard copy document, consulting it and filing it back is a time-consuming and annoying process. With VisionDOC, just use the document index screen to index your files and hardcopy documents according to your own research system. Use filing spaces such as your address and lot number to georeference your files on the territory card. Archive your files in PDF format to allow network consultation, regardless of the original format. Attach documents to your index file with a few clicks of your mouse.

### **Find your documents more easily**

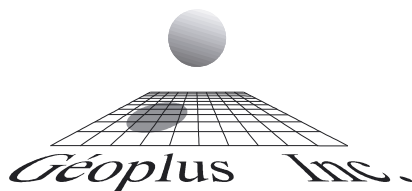

You must find a document, client, or address related to a specific mandate quickly? Just go to the VisionDOC information screen, choose your research filters or indicate the territory on the map. Then surf the resulting list to locate the exact needed document. You can even click on the georeference to locate yourself on the map and validate your choice!

### **Consult. Print. Decide. Act.**

You found the document you were looking for? You can now open it in PDF or original format, as long as you have the application on your PC. Your clients, colleagues and partners will have never been so well served!

### **Automate the production of official documents**

Thanks to the document index and to the fusion code creation assistant, you can use your favourite word processing applications to generate official standardised documents in a few minutes.

## BENEFITS

- ▶ Very easy to use
- ▶ Customizable
- ▶ Adapts to your company's discipline and management style
- ▶ Contributes to increased productivity
- ▶ Reduces document research time and manual document filing
- ▶ Reduces space needs
